Pump installed on amphibious excavator

Perfect combination for dredging

EIK has been partnering with an Italian dredging pump manufacturer, Dragflow, with tremendous successes across various segments of the industry that range from mining, dredging and construction.

The concept of running a dredging pump from an amphibious excavator has been rigorously tested over a long period. We have gathered valuable field data and experience through this partnership program. We are now offering a winning proposition for customers who are in need of a high productivity dredging solution in challenging work environments. Feel free to email us to find out more.

EIK is in no rush to announce new solutions; we are always working diligently behind the scenes. We will only roll them out when they are well proven and tested to our stringent standards. An assurance and commitment to our customers.

Amphibious excavator with Pump

Proven high productivity dredging solutions

Pending customer delivery

AM140 Amphibious Excavator

Thanks to our dealer, we have successfully clinched a major deal in supplying sizeable units of amphibious excavators to a government project in this region. It is a high profile project involving the cleaning and deepening of waterways for flood prevention.

EIK's amphibious undercarriage is once again the choice selection with its proven design, reliability and post sales support.
