## Pipeline to the farming future

Designed for Functionality, Engineered for Reliability.

AM140 Amphibious Excavator

Pipe laying across river

When our customer is in the limelight for a good reason, we are happy for them.

The amphibious excavator is intensely involved in a project in laying pipe across a river. This is a part of a multi-million high profile irrigation project serving the needs of the agricultural, horticultural industry and viticulture enterprises. Once completed, it is expected to transform and elevate the economy of this particular farming district.

Given the unique site condition, the amphibious excavator is probably the most viable solution to carry out the job in the most economical and efficient way.

We are pleased to have delivered the right solution to our customer for them to be successful in the job.

In the past issue, we promised our customers a series of equipment upgrading program will be progressively implemented for the year 2014.

The latest upgrading is the TIG robotic welding machine for the hydraulic tubing. Do feel free to visit our YouTube channel to view this newly installed machine in action.

<https://www.youtube.com/watch?v=5zOviVSvexU>

There are more exciting upgrade on the way, stay tune.

Robotic TIG Welding Machine

Ongoing commitment on quality

A major Malaysian government agency who is responsible for flood control and water management has visited our manufacturing facility.

We took the opportunity to conduct a seminar for the government officials on the objective of sharing our experience

Seminar for government officials

A knowledge sharing session

and knowledge in flood mitigation through the use of amphibious excavator, couple with other dredging attachment solutions.

2014 FIFA World Cup

Enjoy the game, support your team

The world almost stood still and with many have gone crazy on the world cup cheering for their supporting team battling out in Brazil. Over here in EIK, nothing has changed. And rest assured, there is no dip in our production capacity.

While customers enjoy their games and cheering, we continue to work hard to meet the delivery schedule.
